                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              * NOTE: This is a 'working draft' sequence. It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Center: Washington University Genome Sequencing Center

Where differences are found these are annotated as variations where differences are found these are annotated as variations variation may not be found in the sequence submission variation on anotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HS28H20
Human DNA sequence from clone RP1-28H20 on chromosome 20q13.1
Contains the SLC2A10 gene encoding a solute carrier family 2
(facilitated glucose transporter) member 10, the 5' end of a novel
gene, BSTs, STSs, GSSs and three CpG islands, complete sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           misc_feature
numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/Celegans/wormpep This sequence
vas generated from part of bacterial clone contigs of human
chromosome 20, constructed by the Sanger Centre Chromosome 20
Mapping Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr20
This sequence is the entire insert of clone RPI-28H20 This sequence
was finished as follows unless otherwise noted: all regions were
cither double-stranded or sequenced with an alternate chemistry or
covered by high quality data (i.e., phred quality >= 30); an
attempt was made to resolve all sequencing problems, such as
compressions and repeats; all regions were covered by at least one
plasmid subclone or more than one M13 subclone; and the assembly
was confirmed by restriction digser. RPI-28H20 is from the library
Apt.il one tructed by the group of Pieter de Jong. For further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /evidence=not_experimental

consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ë

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DRIK/GFP/CHR7, send mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The clone sequenced to the left is RP11-319F3. Actual start of this clone is at base position 52619 of RP11-319F3 actual end is at base position 16219 of RP11-84K19.

Location/Qualifiers
                                                                                            NOTICE: This sequence may not represent the entire insert of this form. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, B. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8 The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                             This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Well. The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, Clint', Yerkes #C0401; birthdate: 6-6-80). The clone and detailed information can be obtained from ResGen (http://www.resgen.com) or Pieter de Jong and co-workers at
              Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality date (i.e., phred quality >= 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                     PRI 03-JAN-2004

On Oct 4, 2003 this sequence version replaced gi:33859971.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality date (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA
was isolated from white blood cells obtained from a male chimpanzee
(Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The
clone and detailed information can be obtained from ResGen
(http://www.resgen.com) or Pieter de Jong and co-workers at
http://www.bacpac.chori.org.
                  Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

(DEKR-) DEUT KREBSFORSCHUNGSZENTRUM.

Novel nucleic acid molecule encoding monocyte-chemoattractant-protein-1, useful in gene therapy, for treating atherosclerosis and cancer. Disclosure; SEQ ID NO 6; 30pp; English. The invention relates to a novel nucleic acid molecule (I) comprising a sequence encoding monocyte-chemoattractant-protein-1 (MCP-1) or a protein having the biological activity of MCP-1. A protein encoded by a nucleic acid of the invention mas cytostatic, and antiarteriosclerotic activity. A nucleic acid of the invention may have a use in gene therapy. A compound of the invention may have a use in gene therapy. A compound of the invention is useful in the preparation of a medicament for the treatment of atherosclerosis or cancer e.g. cervical carcinoma. A

administering a candidate drug to gene knockout mice, in particular Cc1 deficient, Ccr2-deficient and/ or a Cc12-deficient(Ccr2-deficient dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities can be used for gene therapy purposes. This polynucleotide sequence is the human Cc12 gene and enchancer region DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AATGGCACTTAACTACTTGGAGGTCATGGATGCCTTTGCTAATCTAATAGAAGCTACTGA

    The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders,

The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer
supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK6764 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAW82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; cancer-associated protein; CAP; cancer-associated gene; CA; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 el human cancer associated protein encoded within open reading frame cancer associated gene, useful as targets for diagnosing cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4683 AAAATACAAAAATTAGCCAGGCGGGGGGGGGGGGGGGGCCTGTAGTCCCAGCTACTCGGGAGG

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to

                                                                                                                                                                                                                                                    drug candidate and monitoring the effect of the anticancer drug candidate on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue. This sequence represents a human CA gene of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/published_pct_sequences

The present invention relates to the isolation of novel human connective tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide (cDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the novel human connective tissue related polypeptides. Note: The sequence data for this patent did not form part of the printed specification, but the was obtained in electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          leic acid encoding novel connective tissue associated polypeptides, ed in diagnosing, preventing, treating or ameliorating a disorder such cancer or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 5304 BP; 1550 A; 1037 C; 1017 G; 1700 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the isolation of novel human connective tissue related polypeptides (AAUS6923) and the polymucleotide (CDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polymucleotide sequences of the invention are also useful in gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the novel human connective tissue related polypeptides. Note: The sequence data for this patent did not form part of the printed specification, but the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid encoding novel connective tissue associated polypeptides, used in diagnosing, preventing, treating or ameliorating a disorder such as cancer or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 AAAATATAAAAATTAGCCAGGCGTGATGTCCATGTGCCTGTAGTCCCAGCTACTCGGGAGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes an isolated nucleic acid molecule (I), which comprises a sequence that is at least 95 % identical to a connective tissue-related polymuclectide encoding connective tissue antigens (CTA).

The polypeptide or polymuclectide is useful for preventing, treating, or meliorating medical conditions in a mammal. The connective tissue a polypeptides, polymucleotides and antibodies are particularly useful for treating, preventing and/or prognosing disorders of connective tissues (e.g. rheumatoid arthritis, discoid and systemic lupus erythematosus, celeroderma, or Sjogran's Syndrome), cancers, cancer metastases and/or neoplasias (e.g. leukaemia), neurodegenerative disorders (e.g. Alzheimer's disease, or Parkinson's disease), cardiovascular diseases (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass complications), autoimmune diseases (e.g. systemic lupus erythematosus, complications), autoimmune diseases (e.g. systemic lupus erythematosus, cheumatoid arthritis, or multiple sclerosis), allergic reactions (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CTGAGGCAGGAGAACCTCTTGAATCCAGGAGGCGCAGGTTGCAGTGAGCAGATAGTGC 120

WPI; 2003-634869/60. P-PSDB; ADB59409.

New connective tissue-related polypeptides and polynucleotides, useful for treating, preventing and/or prognosing e.g. disorders of connective tissue, (e.g. rheumatoid arthritis), cancers, cancer metastases and/or neoplasias.

Disclosure, SEQ ID NO 1215; 248pp; English.

The invention describes an isolated nucleic acid molecule (I), which comprises a sequence that is at least 95 % identical to a connective tissue-related polymucleotide encoding connective tissue antigens (CTA). The polympetide or polymetheotide is useful for preventing, treating, or ameliorating medical conditions in a mammal. The connective tissue polympetides, polymucleotides and antibodies are particularly useful for proposing disorders of connective tissues treating, preventing and/or prognosing disorders of connective tissues treating, preventing and/or prognosing disorders (e.g. rheumatoid arthritis, disorid and systemic lupus erythematosus, selencema, or Siogren's syndrome), cancers, cancer metastases and/or neoplassias (e.g. leukaemia), neurodegenerative disorders (e.g. Alzheimer's disease, or Parkinson's disease), cardiovascular diseases (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass complications), autoimmune diseases (e.g. systemic lupus erythematosus, rheumatoid arthritis, or multiple sclerosis), allergic reactions (e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid molecule (or its fragment, homologue complement or allelic variant) encoding a human secreted protein (and its fragment, domain, epitope, variant, secreted form and species variant). Also included are a recombinant vector comprising the nucleic acid, a recombinant host cell comprising the vector wector, an antibody against the secreted protein, a recombinant host cell that expresses the secreted protein and a method of identifying a binding partner of the secreted protein. The nucleic acid and protein are used to prevent, diagnose, treat or amelicate a medical condition in e.g. humans, mice, rabbits, goats, horses, cate, dogs, chickens or sheep for example autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative

disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arreef, cerebrovascular disorders e.g. cardiac arreef, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. Many other diseases and disorders are listed in the specification. The polypeptides can also be used to aid wound healing an epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The presents ads DNA fragment of the gene for a novel human secreted protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5927

ABR48145) and their coding sequences (ACC50044-ACC50056). The proteins coding sequences (ACC50044-ACC50056). The proteins and their coding sequences (ACC50044-ACC50056). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary carteriosclerosis and myocardial isorders, reproductive disorders, immune system disorders, muscular disorders, pulmonary disorders, remained since disorders and for cancerous diseases and conditions, for proliferative disorders and/or cancerous diseases and conditions, for wound healing and epithelial cell proliferation, to treating or proliferation for treating thrombosis and arteriosclerosis, for treating or preventing neural damage which occurs in neuronal disorders or neurodegenerative conditions such as Alzheimer's disease and parkinson's carecteristic thrombosis and with other disorders or neurodegenerative conditions such as Alzheimer's disease and parkinson's cransplants or bone and periodontal regeneration and aid in tissue cransplants or bone grafts, to prevent skin adjing or hair loss, to stimulate growth and differentiation of haematopoietic cells and bone marged in combination with other cytokines, to maintain organs before transplantation or for supporting cell culture of primary tissues, to increase or decrease differentiation or proliferation of cembryonic stem cells, or to modulate mammalian characteristics or metabolism. The present sequence was used to illustrate the invention.

Compans before transplantation or for supporting cell culture of primary and is available from WIPO at companion or proliferation of former and is available from the present equence data for this patent was published in electronic former and is available from the companion or the companion or the companion or the companion or the companion or the companion or the companion or the companion or the companion or the companion or t

ABZ71190-ABZ71478 represent cDNAs corresponding to 178 human secreted protein genes, and ABP00011-ABP00299 represent the proteins they encode. protein genes, and ABP00011-ABP00299 represent the proteins they encode. CC invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening, and recombinant the use of the secreted proteins in drug screening, and recombinant covectors and host cells comprising a nucleic acid of the invention. The secreted proteins, uncleic acids encoding them, antibodies or antibody cradents specific for the secreted proteins, and modulators of protein crativity are useful for diagnosing, treating, ameliorating or preventing activity are useful for diagnosing, treating, ameliorating or preventing cospopagus, stomach, small intestine, large intestine, liver, biliary cospopagus, stomach, small intestine, large intestine, liver, biliary cract and pancreas, and include cancers of these organs and tissues. The reatment of immune disorders, inflammation, infection, cractment of immune disorders, and to promote wound healing. Nucleic acids of the invention may be used for chromosome indentification, chromosome comping, in gene therapy, for identifying individuals from minute considering and protein genomic markers. The present sequence represents a human secreted protein genomic markers. The present sequence represents a human secreted protein genomic markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5808 AAAATACAGAAATTAGCTGGGTGTGATGGTGCGTGCTGTAATCCCAGCTACTCGGGAGC 5867

The invention relates to a novel human secreted polypeptide comprising a defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antagonist of the invention may be useful for preparing a composition for diagnosing or treating a haemopoietic or haematologic disorder such as anaemia, autoimmune disorders such as rheunatoid arthritis, inflammation, Grave's disease, disbetes, systemic lupus erythematosus or glomerulonephritis, neurodegenerative disorders including Parkinson's disease and Alzheimer's disease, wounds and hyperproliferative disorders including attention attention attention and hyperproliferative disorders including catherosclerosis or cancer, as well as bacterial, viral, fungal or parasitic infections. The polypeptide may also be used during gene the polypeptide with a binding partner and determining whether the binding partner increases to decreases the activity of the polypeptide. The current sequence is that of the human secreted protein-related DNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5808 AAAATACAGAAAATTAGCTGGGTGTGATGGTGCGTGCCTGTAATCCCAGCTACTCGGGAGC 5867

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABB91448 and ABB91815-ABB91911 encoding human secreted proteins ABB91449-
ABB91834. Also disclosed is a recombinant vector comprising a
ABB91834. Also disclosed is a recombinant vector comprising a
polynucleotide of the invention, and a recombinant host cell comprising
the recombinant vector. The polypeptide of the invention is useful in
identifying a binding partner by contacting the polypeptide with a
cleaning partner and determining whether the binding partner increases
of binding partner increases or
decreases activity of the polypeptide. The polypeptide, polynucleotide,
antibody or its fragment, agonist or antagonist are useful for preparing
antibody or its fragment, agonist or antagonist are useful for preparing
conditions related to diabetes. The present sequence is that of the human
immunoglobulin FC portion used to generate fusion proteins, increasing
the stability of the fused protein as compared to the secreted protein
conditions the sequence data for this patent did not form part of the
printed specification, but was obtained in electronic format directly
from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present invention relates to an isolated polypeptide or human secreted protein. The polypeptides, nucleic acid molecules, antibodies or their fragments, and agonists or antagonists that bind are useful for their fragments, and agonists or antagonists that bind are useful for preparing a diagnostic or pharmaceutical composition for diagnosing or treating allergic or asthmatic disorders. The polypeptide is also useful for identifying a binding partner by contacting the polypeptide with a contact partner increases or decreases the activity of the polypeptide. The polypeptide and nucleic acid molecules are also useful for detecting, preventing, diagnosing, consplaying, treating or ameliorating inflammatory disorders or prognosticating, treating or ameliorating inflammatory disorders in explained in the polypeptide and disorders or gastrointestinal continuation, immune disorders, cardiovascular disorders, or gastrointestinal continuation, radiation hybrid mapping or long-range restriction disorders. The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction probes the polypeptides and antibodies are useful for providing combinate chemistry assays. The present sequence represents a cDNA clone for mapping is monohistochemistry assays. The present sequence represents a cDNA clone Sequence 9796 BP; 2064 A; 2679 C; 2566 G; 2487 T; 0 U; 0 Other; Claim 1; SEQ ID NO 616; 1323pp; English hypersensitivity disorders. Rosen CA, Ruben SM; WPI; 2003-140218/13. from ATCC deposit. WO200290526-A2. Homo sapiens 14-NOV-2002 15-JAN-2004 ADD38134; RESULT 15
